

Engineering and Architecture

We understand the engineering and architecture as two complementary areas in the development of our work. We bring all our calculations and designs strict sustainability criteria.

Developed under the requirements of the customer projects in the following specialties:

- Industrial facilities, buildings and developments:

Electricity, plumbing, drainage, air conditioning, heating, telecommunications, fire, gas, etc.

- Projects of industrial facilities.

- Projects of trade reforms:

Franchises, retail chains, banks, etc.

- Electrical Infrastructure:

Transmission lines, distribution lines, transformer stations, transformers, power generation, etc.

- Renewable Energy:

Wind and small wind.

Solar (photovoltaic + photothermal)

Biomass

Geothermal

Cogeneration

Audits and energy efficiency

- Architecture:

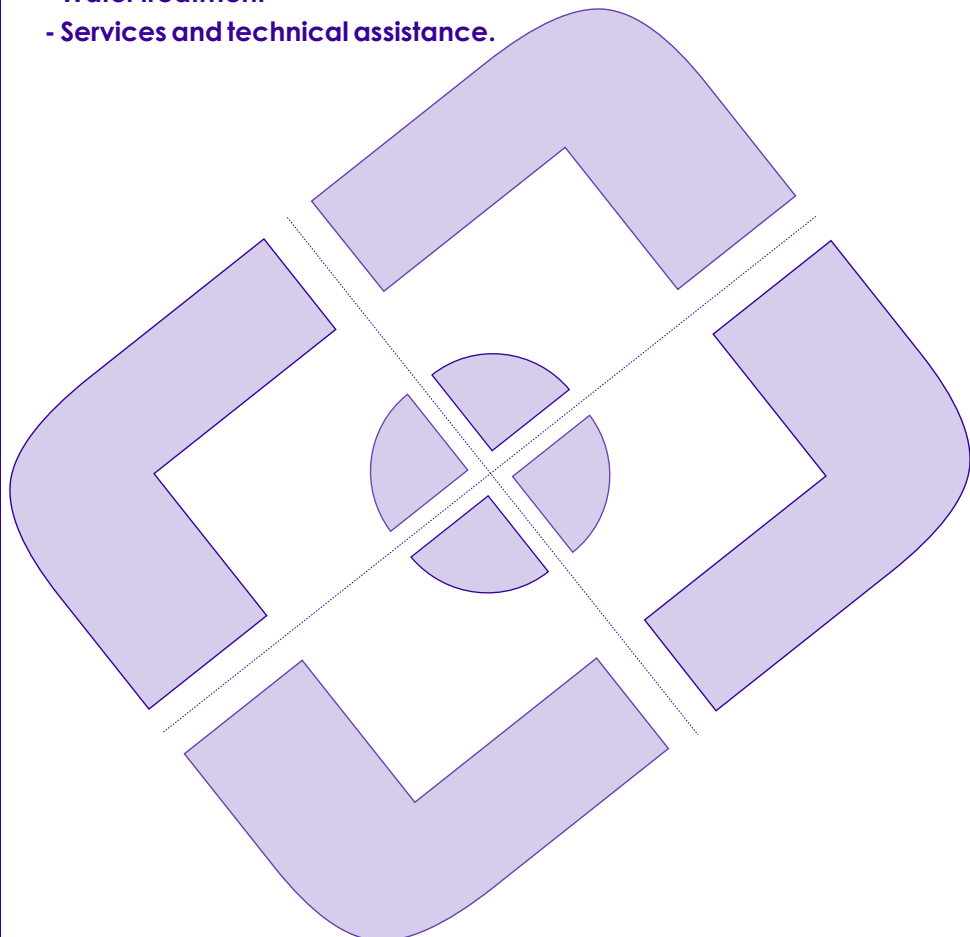

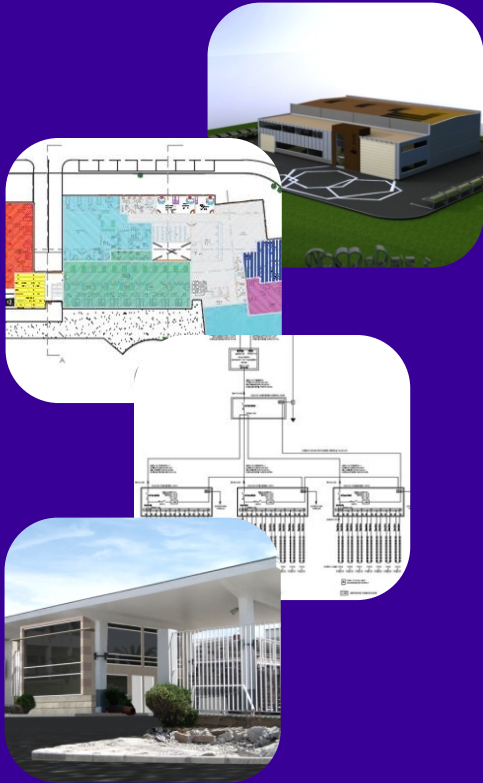

Warehouses.

Residential buildings.

Singular Building: Administrative, sports, services, health, schools, parking lots, shopping centers

- Water treatment

- Services and technical assistance.
